Mark Pachucki

I'm a Staff Product Designer with over 10 years of experience shaping digital products—from data-rich AI tools to e-commerce platforms and mobile apps. I've worked on design teams of all sizes, from solo efforts to global teams of 30+, and thrive in cross-functional collaboration with product managers, engineers, marketers, data scientists, customer support teams, and executives.

My background in project management, client service, storytelling, and leadership helps me excel at being a high-impact designer. I'm skilled across the entire product lifecycle: conducting user research, uncovering problems, prototyping and testing solutions, partnering with engineering to ship them, and measuring real-world impact.

Ultimately, I love building thoughtful, useful products with diverse teams—and turning complex challenges into intuitive experiences.

Professional Experience

Staff Product Designer — 2023 - Present
Delivery Hero

Designing the AdTech experience for restaurant owners worldwide, simplifying campaign creation and performance insights for novices and experts alike.
Key highlights:

- Redesigned the campaign creation flow, increasing conversion by 11% and adding €560K in monthly revenue
- Built an internal AI-powered copy assistant to help product and design teams write brand-aligned copy faster and more consistently
- Led the "best-in-class reporting" initiative, defining reusable guidelines to ensure clarity and consistency across all reporting pages

User Experience Designer — 2021 - 2022
McMaster-Carr

Designed for *McMaster.com*, a high-volume e-commerce site with 800,000+ industrial products. I tackled complex UX challenges using qualitative/quantitative research, divergent thinking, and usability testing to:

- Improve product comparison
- Reduce friction in key flows (e.g., add to cart, checkout)
- Simplify complex product families for easier shopping

Senior Product Designer — 2018 - 2021
Narrative Science

Led design for *Lexio*, an AI-powered product that transforms data into written stories, enabling non-analysts to make data-driven decisions. Responsibilities included:

- Conducting user research and usability testing
- Mapping user flows and prototyping
- Creating high-fidelity designs and specs for engineering
- Building a comprehensive design system

Senior User Experience Architect — 2015 - 2017
Nielsen

UX Designer for a suite of Nielsen products, focused on creating a unified ecosystem for data integration. Responsibilities included:

- User research, journey mapping, and contextual inquiry
- Designing low- and high-fidelity wireframes
- Collaborating with cross-functional teams to align design with product strategy

Education

IDEO U — 2021-2022
Advanced Design Thinking

Interaction Design Foundation — 2016-2017

Virginia Tech — 2009–2013
Business Information Technology
Industrial Design
